

Welcome to the Credit One Bank Web Interactive React Test for 2021!

Objective

You must develop a layover page in ReactJs and host on your personal Github account. The assets are included in the “assets” folder of this zip file. The end result of your application must be a fully responsive and working layover page that accurately represents the mockups inside of the “mockup” folder of this zip file.

Setup

1. Create a new repository in your Github account.
2. Create a separate branch other than main/master to make commits to. (Use as many as you need, we're watching 👀)
3. Before submission, initiate a pull request to main/master and merge the PR.

Functionality

1. When the user clicks on the orange “Accept Now” button the header bar should switch to a solid blue as shown in the mockup “alt” file (png).
2. When the user clicks the “No Thanks” button, in a new tab, it must link out to <https://creditonebank.com>
3. Fully responsive at desktop, tablet, and mobile breakpoints.

Code

1. Be sure to create at least one reusable component
2. Make sure to write your styles in a separate file from your js/jsx files.

Submission

Send your Github repo link to jeremy.ornelas@creditone.com && christopher.jones@creditone.com

Extra Credit

- Add your own flare or easter egg to the code or application without compromising the objective and/or design!

Requirements

1. Have Fun!
